DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to voltage regulator, classified in class 322, subclass 28.
 - II. Claims 7-11, drawn to voltage regulator, classified in class 322, subclass 24.
 - III. Claim 12, drawn to method of controlling power generation, classified in class 318, subclass 121.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as using a voltage regulator having an output voltage control means for controlling a high voltage pulse signal in order to discriminate conditions and keeping track of the duration of the signal. Such system are used in real time devices and are not necessary in all of the voltage regulators, for example

in invention I. Moreover, using a flywheel circuit, a failure detector and a generation control are not required by invention II. See MPEP § 806.05(d).

3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention III describes a method that detects a high pulse larger than a regulated signal and keeps track so that the signal may be cut off or repeated, depending on a failure condition. Such devices are commonly used in real time products and function differently than to the invention I disclosed.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
